## FISH FACTS 2012

Results from fishery surveys conducted during the summer of 2012 are shown on the following pages. Fish capture techniques are dependent upon the objectives of the survey and may include gill nets or downhaul trap nets. Fish sizes are typically reported by weight (g) for gill nets and length (cm) for trap nets.

If you have any questions on survey methods or equipment, or if you have concerns about the health of a specific fishery, please contact your nearest Ministry of Environment fisheries biologist.
